the living chair...

The **living chair** is the result of years of design advances in task seating all culminating in a single practical and comfortable seating solution. Its passive waterfall seat front ensures that there is never too much pressure behind the knee, its back flexes as the user moves allowing natural movement throughout its use but always with support.

...designed with you in mind

flexible back

The upper areas of the back section flex to provide the user with support whilst moving to do everyday tasks at their desk.

height adjustable back

Standard height adjustable back 'ratchet' mechanism allows the user to raise or lower the back into 6 positions.

advanced seat slide

The seat slide fitted to this chair uses a mechanical rack action which allows the user to adjust the seat depth easily, even with their full weight on the chair. A wheel located within easy reach is used to 'roll' the seat forwards or backwards to suit the user.

waterfall front

A seat base which flexes to alleviate pressure points under the knee area of user.

The chair is fitted with a fully synchronous mechanism which automatically adjusts the seat angle in relation to the back when reclining. The recline tension is fully adjustable and the recline angle can be locked in four positions or left in a 'free recline' setting. The recline lock feature is fitted with an 'anti-kick' device allowing the operator to collect the back from any locked position.

back upholstery detail

Chairs upholstered in fabric have a stitch detail in the back area. Chairs upholstered in leather have a leather covered decal as standard and the option of a high quality chrome decal to complement chrome arms and bases - as shown opposite.

chrome cantilever visitor chair

Designed to perfectly complement the Living operator chair this stylish cantilever version is an ideal choice to complement boardroom or meeting tables.
